# Victor-Daniel Luca

CS Student

Hi, I'm Dani, a passionate learner with a strong interest in programming. While I don't consider myself to be a standout, my key strengths lie in adaptability and rapid learning. I enjoy tackling new challenges that push me to acquire skills quickly and efficiently. The combination of challenge and purpose drives me, and the satisfaction of achieving something through my own efforts is what motivates me most. Without a clear challenge or goal, however, I find it difficult to stay motivated.

## Education

### Bachelor's degree, West University of Timișoara

September 2024 - July 2027

Computer Science in English

### High School Diploma, “Petru Rareș” National College Beclean

September 2020 - July 2024

Mathematics and Computer Science

## Certifications

### C1 Advanced - English Certificate, Cambridge University Press & Assessment

February 2024

## Projects

---

### **DIY HomeServer** - *In Progress*

Project: [Link](#)

- Repurposed 2 laptops in Debian Linux servers for a homelab.
- Primary server hosts services including: Samba, Navidrome, LinuxGSM and Lancache.
- Secondary server used for automated backups using BorgBackup.
- A Hetzner VPS that is used as a WireGuard relay to access homelab behind CGNAT.

### **CTFs**

Project: [Link](#)

- Created and maintain a GitHub repository documenting CTF challenges, complete with my solutions and explanations.
- Completed challenges focusing on Python scripting, cryptography, reverse engineering and exploitation.

### **IMDb Rating Predictor**

Project: [Link](#)

- Developed a Python predictive model using Pandas, trained on top 1000 IMDb movies.
- Implemented CSV data exports and graph generation.

### **DiscordBot** - *In Progress (unfinished, still adding features)*

Project: [Link](#)

- Developed my own Discord bot in Python, self-hosted on a Hetzner VPS.
- Set up a CI/CD pipeline using GitHub Actions.

Contributions

---

## Hetzner Community Content

Contribution: Link

May 2026

- Authored an official Hetzner Community tutorial on configuring a WireGuard VPS relay to bypass CGNAT for home servers.
